This document is fictionalized from a published federal position description solely for an AI-in-healthcare classroom exercise. Names, organization, facility, PD number, and agency-specific references have been changed.

The Primary Care Service Line Manager has full responsibility for a wide range of administrative functions relating to the Primary Care Service Line. The incumbent is expected to have broad knowledge of healthcare management systems and principles relating to these areas. The Primary Care Service Line Manager has responsibility for input in decision making and implementing decisions affecting the Service.

The incumbent is a senior administrator responsible for providing input for strategic planning and direction, budgetary oversight and the administrative management structure to support a comprehensive patient care delivery system within the Primary Care Service Line.

Supervision and Staffing

The incumbent directs and supervises employees responsible for the administrative support and management of the Primary Care Service Line. Such employees include:

- 1.0 GS-0671-12 Health System Specialist
- 1.0 GS-0341-11 Administrative Officer
- 1.0 GS-0301-11 Program Specialist (Clinical Operations)
- 3.0 GS-0303-7 Program Support Assistants
- 1.0 GS-0679-7 Lead Medical Support Assistant
- 6.0 GS-0679-6 and GS-0679-5 Advanced Medical Support Assistants
- 1.0 GS-0640-4 Medical Support Aid
- 2.0 GS-0640-4 Patient Escorts

Resource Management

- Manage Service Line resource allocation and utilization, and set priorities with the Service Chief for support staff, services, supplies, and equipment.
- Prepare and review budget estimates for fund control points and negotiate funding levels with management officials.
- Establish and monitor performance measures for service quality, access, productivity, and cost effectiveness.
- Oversee Service Line acquisitions and contracts, serve on technical evaluation panels, and act as Contracting Officer's Representative (COR).

Analysis and Planning

- Work with the Service Chief on long- and short-term strategic planning that integrates resource, readiness, and access requirements.
- Collect, monitor, and analyze administrative and non-clinical operational data across the Service Line.
- Identify and recommend ways to combine, eliminate, simplify, or improve Service Line processes.
- Design the administrative structure supporting new program initiatives and develop supporting data for business case proposals.

Human Resource Development

- Manage recruitment, orientation, and retention of support staff to meet Service Line staffing levels.
- Conduct performance management and recommend action on promotions, leave, awards, and discipline.
- Plan and oversee the annual training plan and career development programs for Service Line staff.
- Serve as primary liaison with labor organizations and bargaining units.

Information Management

- Facilitate medical record and information-management practices meeting DHA and Joint Commission standards.
- Oversee workload input and data validation, and monitor access, continuity, referral, enrollment, and productivity data.
- Manage the operational impact of MHS GENESIS, appointment and referral systems, and Service Line dashboards.

Communications

- Develop and maintain relations with other military treatment facilities, community providers, teaching affiliates, and beneficiary organizations.
- Represent the Service Chief in facility meetings and public engagements.
- Develop, implement, and monitor a Service Line patient satisfaction program and take corrective action as needed.

Risk Management and Quality Improvement

- Coordinate Service Line efforts to identify, evaluate, and reduce risk to patients, staff, and visitors.
- Lead internal system reviews and corrective action to maintain compliance with accreditation and regulatory standards.
- Build team-based quality improvement plans with defined goals, performance measures, and process-improvement methods.

Skills and knowledge required (as written)

- Captures data and uses spreadsheets and graphical software to organize and display it.
- Prepares recurring workload and productivity reports from the data warehouse.
- Maintains medical records management and paper filing practices.
- Provides initial and ongoing applications training to Service Line staff.
- Supports cost and workload mapping and data-validation efforts.
- Uses database management and decision-support applications to pull data from disparate sources.
